

ESBBC Summer School Cambridge 2025

Bio-composites for wind energy applications Focus on damping and nonlinear behaviors

PhD Candidate: BELAHCEN Mohamed Amine

PhD Advisors: OUISSE Morvan, PLACET Vincent, BUTAUD Pauline

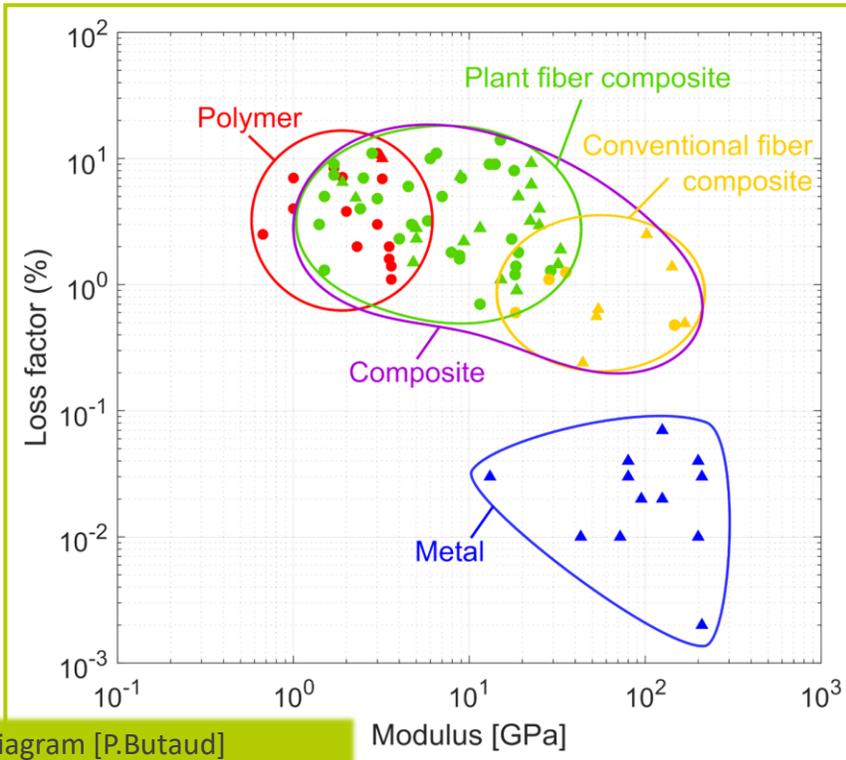

SSUCHY-Next:
Focus on damping & nonlinearities
(WP3, SSUCHY-Next)

This project has received funding from the Circular Bio-based Europe Joint Undertaking (CBE JU) under grant agreement No 101157517. The JU receives support from the European Union Horizon Europe research and innovation programme and the Bio Based Industries Consortium.

Towards Sustainable and High-Performance Composites

Combining environmental responsibility with functional performance

Ashby diagram [P. Butaud]
Loss-modulus map from literature

Plant fibers: a key lever to balance damping and stiffness

Objectives

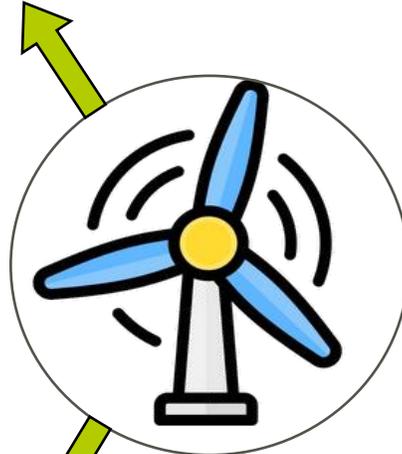

- ⇒ Improving **structural damping** and the **stiffness-to-damping compromise** of bio-based composites
- ⇒ Considering **material damping** and **nonlinear behavior** in the design of structures such as **wind turbine blades**

Damping sources

Structural

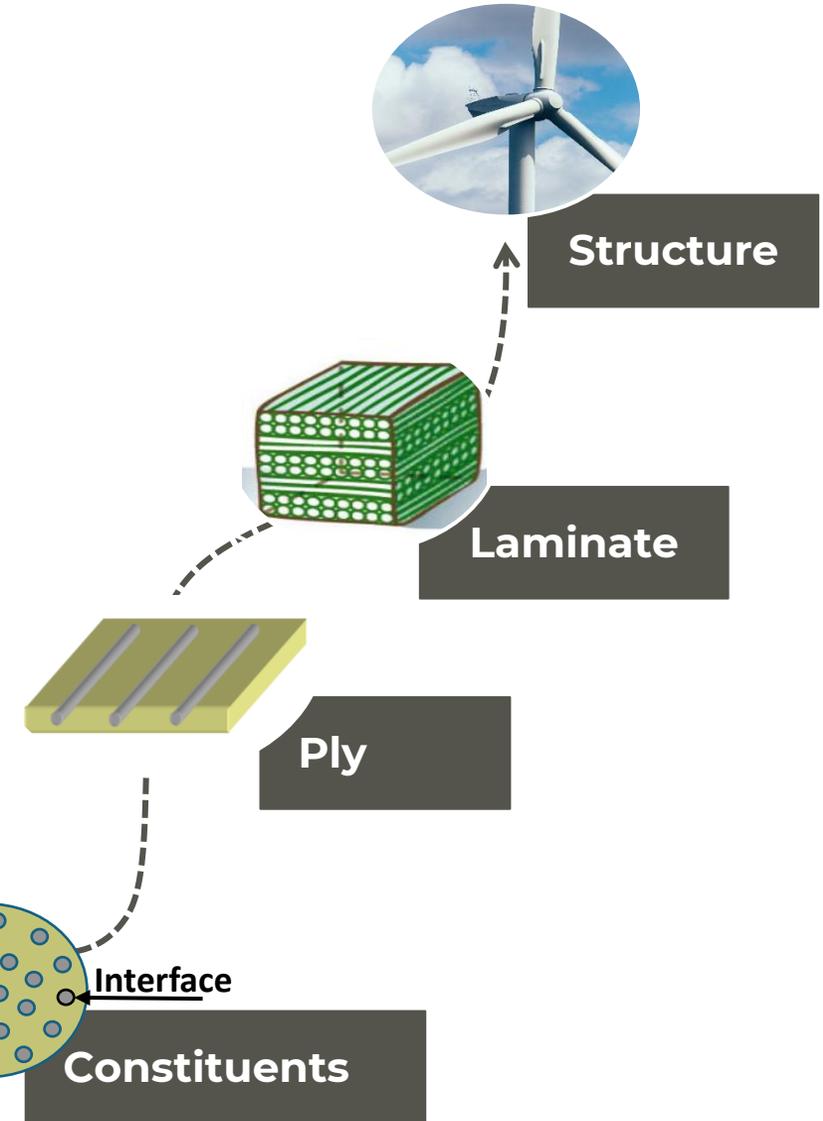

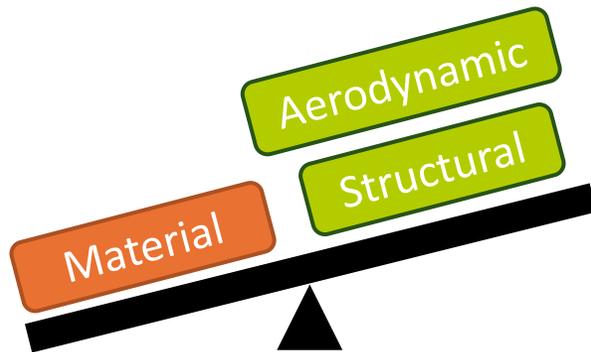

Aerodynamic

What is the part of material damping in the global damping ?

Material

Need a model to include material damping in the design of blades

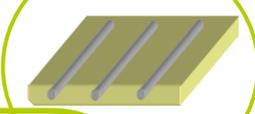

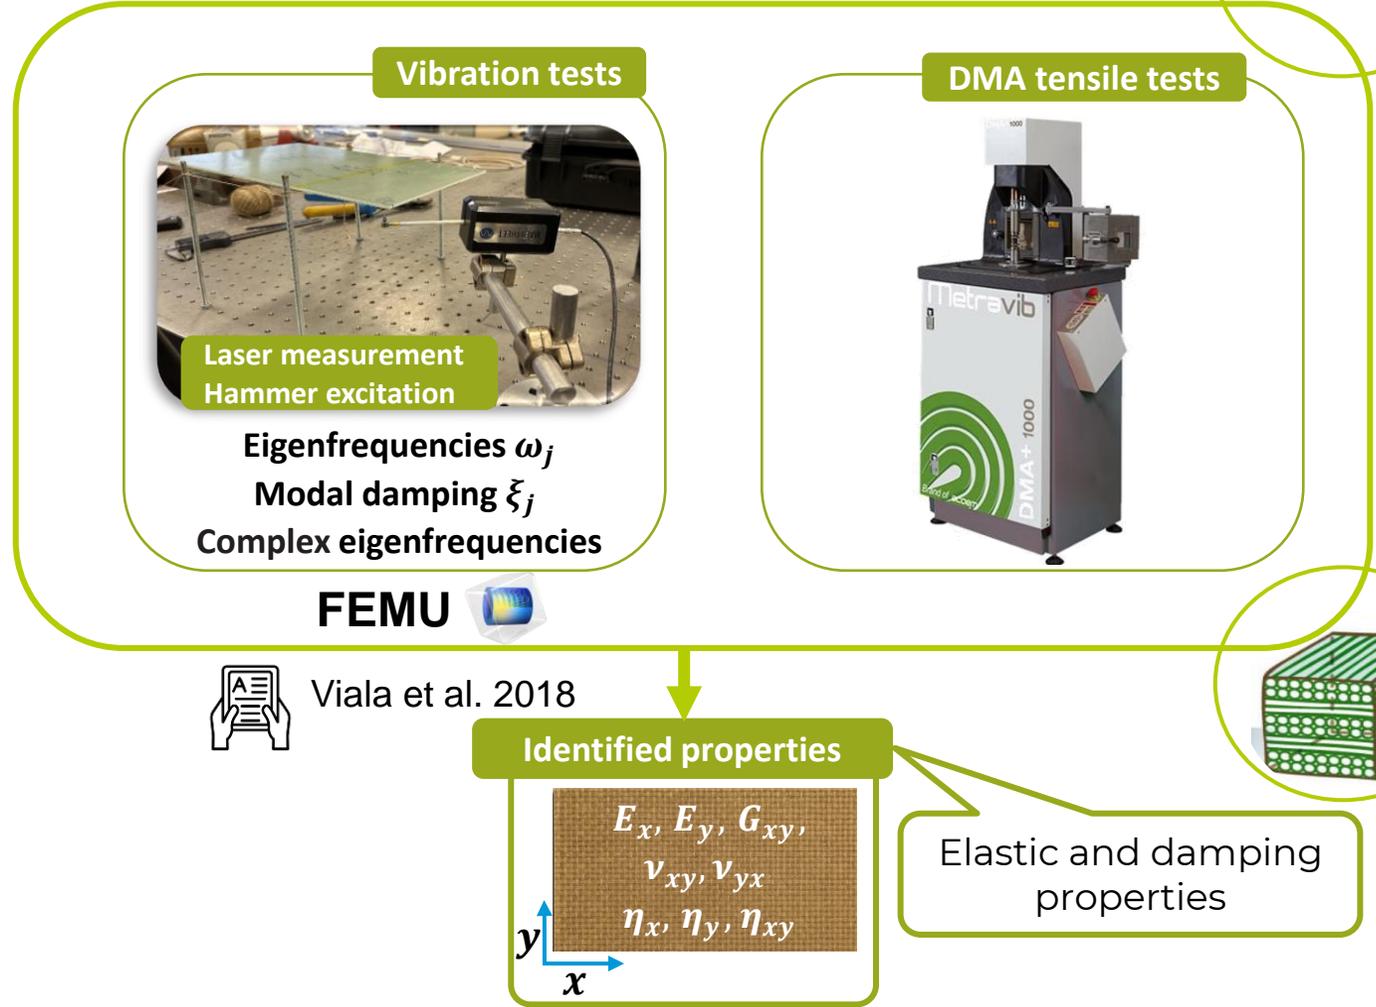

Elastic and damping properties identification

Blade prototype

First results of composite identification

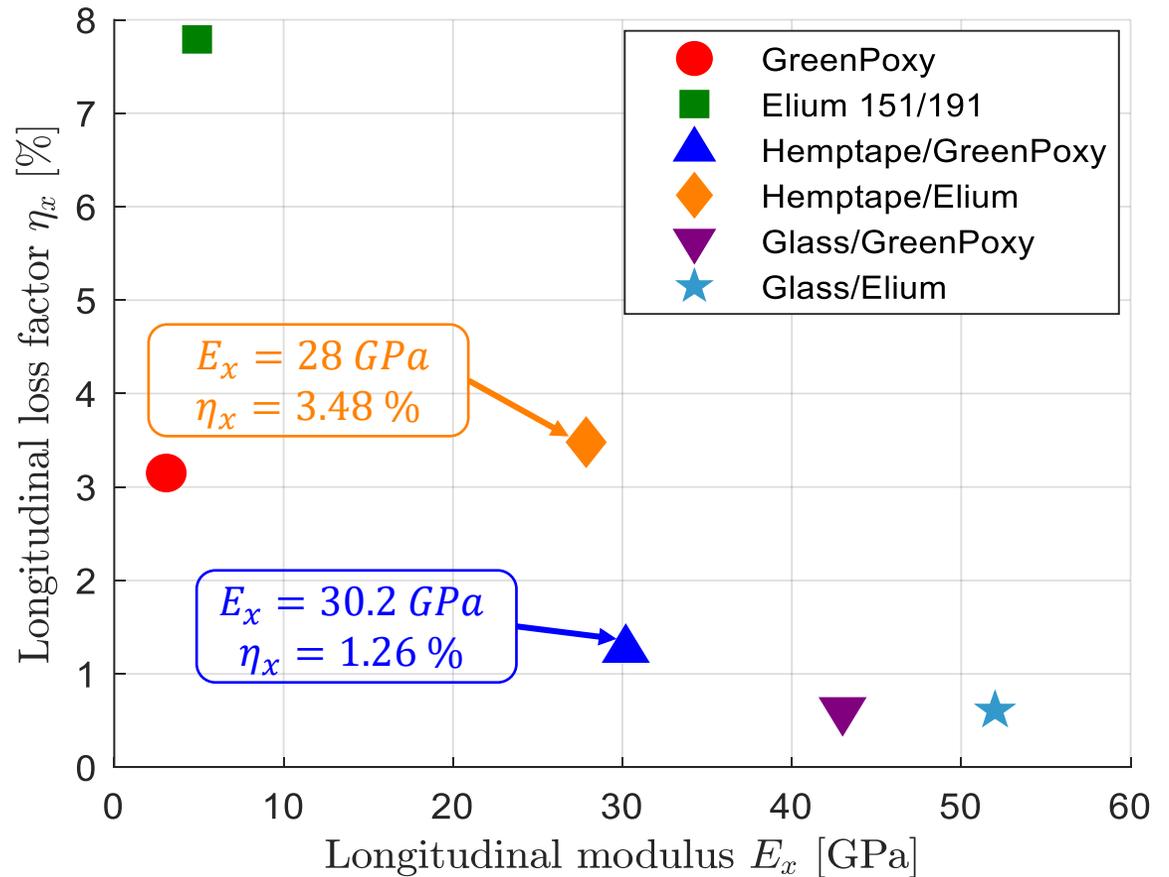

How the properties of newly developed constituents can improve / influence the behavior of a complex structure?

Fibers

Resin

THANK YOU FOR YOUR ATTENTION
